## **ManageUp Unveils Its Mobile App at TechDay LA**

Every company is trying to accomplish something heroic. Doing this often requires collaboration between people across multiple functions and organizations. Management has difficulties keeping track of progress on these complex initiatives, resorting to too many meetings and emails. Individuals have difficulties accessing needed resources or even knowing what is necessary for them to get their work done. This contributes to work not getting done, adds to employees' stress, disengagement, turnover, and impacts the bottom line.

ManageUp assists all employees - from those in management positions to the frontline workers - to optimize performance by strategizing tasks and communication. ManageUp simplifies workflows and procedures in one software platform through collaboration, workflow management, performance management, and security provided by Amazon Web Service.

We are proud to launch our ManageUp app. In this version, you can:

1. Stay connected anytime: create channels with your team, have direct 1:1 communication with individuals
2. Share knowledge from files, photos, video links, emojis, with your teammates.
3. Collaborate better by seeing who is online/available.
4. Synchronize your conversations seamlessly across all devices.

Download its free app at iOS and Android app stores or sign up at [www.manageupprm.com](http://www.manageupprm.com).

###

ManageUp, is a comprehensive SaaS platform to manage your work and your team. It incorporates team thread/channel communication, task and project management, knowledge sharing, and gamified employee engagement in one platform allowing for full transparency and accountability. No other software encompasses this range of capabilities, allowing user to both manage operations and quantitatively manage employee and team performance in real time.
